Dear Colleagues,

We have great pleasure to welcome you to the Advanced Ceramic and Application Conference VII organized by the Serbian Ceramic Society in cooperation with the Institute for Testing of Materials, Institute of Technical Sciences of SASA, Institute of Chemistry Technology and Metallurgy and Institute for Technology of Nuclear and Other Raw Mineral Materials.

Advanced Ceramics today include many old-known ceramic materials produced through newly available processing techniques as well as broad range of the innovative compounds and composites, particularly with plastics and metals. Such developed new materials with improved performances already bring a new quality in the everyday life. The chosen Conference topics cover contributions from a fundamental theoretical research in advanced ceramics, computer-aided design and modeling of a new ceramics products, manufacturing of nanoceramic devices, developing of multifunctional ceramic processing routes, etc. Traditionally, ACA Conferences gather leading researchers, engineers, specialist, professors and PhD students trying to emphasize the key achievements which will enable the wide spread use of the advanced ceramics products in High-Tech industry, renewable energy utilization, environmental efficiency, security, space technology, cultural heritage, etc.

Serbian Ceramic Society has been initiated in 1995/1996 and fully registered in 1997 as Yugoslav Ceramic Society, being strongly supported by American Ceramic Society. Since 2009, it has continued as Serbian Ceramic Society in accordance to the Serbian law procedure. Serbian Ceramic Society is almost the only one Ceramic Society in the South-East Europe, with members from more than 20 Institutes and Universities, active in 16 sessions, by program and the frames which are defined by the American Ceramic Society activities.

This year, the conference is dedicated to the memory of Academician Momčilo M. Ristić (1929-2018), Honorary President of the Serbian Ceramic Society and founder of Material Science in our country.

Prof. Dr Vojislav Mitić,
President of the Serbian Ceramic Society
World Academy Ceramics Member
European Academy of Sciences & Arts Member

Prof. Dr Olivera Milošević,
President of the General Assembly of the Serbian
Ceramic Society
Academy of Engineering Sciences of Serbia Member

Conference Topics

Basic Ceramic Science & Sintering – *in memoriam Momčilo M.Ristić, academician*

Optical, Glass & Electro Ceramics

Nano & Bio Ceramics

Modeling & Simulation

Advanced Ceramics

Heritage, Arts & Design

Guide on Science Writing

Conference Co-chairmens:

Prof. Dr. Vojislav Mitić SRB

Prof. Dr. Olivera Milošević SRB

Prof. Dr. Marcel Van de Voorde EU

Prof. Dr. Rainer Gadow GER

Conference Programme Chairs:

Dr. Lidija Mančić SRB

Dr. Nina Obradović SRB

Scientific Committee

Academician Zoran Đurić SRB

Academician Ninoslav Stojadinović SRB

Academician Zoran Popović SRB

Academician Miroslav Gašić SRB

Academician Laszlo Forro CHE

Prof. Dr. Vojislav Mitić SRB

Prof. Dr. Marcel Van de Voorde EEZ

Prof. Dr. David Johnson GBR

Prof. Dr. Jurgen G. Heinrich DEU

Prof. Dr. Masohiro Yoshimura JPN

Dr. Mrityunjay "Jay" Singh USA

Prof. Dr. Rainer Gadow DEU

Prof. Dr. Pavol Šajgalik SVN

Dr. Richard Todd GBR

Dr. Moritz von Witzleben DEU

Prof. Dr. Hans Fecht DEU

Dr. Dušan Jovanović SRB

Prof. Dr. Olivera Milošević SRB

Prof. Dr. Vladimir Pavlović SRB

Dr. Nina Obradović SRB

Dr. Lidija Mančić SRB

Prof. Dr. Steven Tidrow USA

Dr. Takashi Goto, Japan

Dr. Jonjaua Ranogajec SRB

Dr. Snežana Pašalić SRB

Prof. Dr. Zoran Nikolić SRB

Dr. Zagorka Radojević SRB

Dr. Nebojša Romčević SRB

Dr. Zorica Lazarević SRB

Prof. Dr. Ljubica Pavlović SRB

Prof. Dr. Nebojša Mitrović SRB

Prof. Dr. Ljubiša Kocić SRB

Dr. Aleksandra Milutinović–Nikolić SRB

Dr. Predrag Banković SRB

Dr. Zorica Mojović SRB

Dr. Dušan Milivojević SRB

Dr. Miomir Korać SRB

Prof. Dr. Branislav Vlahović USA

Dr. Radomir Žikić SRB

Prof. Dr. Stevo Najman SRB

Dr. Biljana Djordjević SRB

Organizing Committee

Prof. Dr. Vojislav Mitić SRB

Dr. Lidija Mančić SRB

Dr. Nina Obradović SRB

Prof. Dr. Vladimir Pavlović SRB

Dr. Dušan Jovanović SRB

Dr. Vesna Paunović SRB

Dr. Darko Kosanović SRB

Dr. Anja Terzić SRB

Dr. Suzana Filipović SRB

Dr. Vladimir Blagojević SRB

Dr. Marina Vuković SRB

Dr. Milica Ćurčić SRB

Ivana Dinić SRB

incoming solar radiation, which results in a certain energy degree within the Earth's atmospheric composition, and we can roughly describe it as the Earth's climate.

Renewable energy is obtained from natural processes that are constantly renewed. In its various forms, it derives directly from the sun, or from heat generated deep within the Earth. It also includes electricity and heat generated from sources such as sunlight, wind, oceans, hydropower, biomass and geothermal energy, biofuels and hydrogen from renewable sources. Each of these sources has unique characteristics that influence how and where they can be used. Renewable energy sources include: solar energy, wind energy, biomass, biofuel, biogas, geothermal sources, energy of small watercourses, tidal energy, energy of the waves, internal energy of the sea and the ocean.

Thermally induced phase transformation of K-exchange LTA zeolite is followed in the range from room temperature to 1500 °C. The frameworks collapse into amorphous intermediate products after heating between 600 and 650 °C. Prolonged heating of the intermediate product over 1100 °C results directly in formation a kalsilite [$a=8.1095(4)$ Å, $b=12.824(4)$ Å, $c=7.0674(4)$ Å, $\beta=115.89(3)$]. The crystalline phases of kalsilite in temperature range between 700 and 1500 °C was investigated by X-ray powder analyses.

Well known material with ferroelectric properties, BaTiO₃-ceramics, have many advanced applications. Fractal approach in analyzing of these structures can be one of the solution for investigation of morphology. It is known that a wide range of disordered systems can be characterized by the fractal nature over a microscopic correlation length, and on a small scale the energy transformations are permitted. Due to the lack of energy, priorities of the future frontiers in ce-

amics science is to expand the knowledge even down to nano and towards new and alternative energy sources. Fractal configuration nature of BaTiO₃ and other ceramics is based on phenomena that ceramic grains have fractal shape; there are pores and inter-granular space and there is particles Brownian fractal motion inside the material, during and after sintering, in the form of micro-particles flow, which is the most important. These important facts are in function of further developing of knowledge of energy harvesting and storage.

Fractals are fragmented geometric shapes based on each or parts self-similarity. Fractal dimension (FD) is the most important characteristics in fractal nature analysis. There are many fractals applications including the forensic photography. The fractals image reconstruction is very important for modern forensic science. Here we demonstrate the very new original fractal applications in forensic sciences. This is a quite new application in crime investigations specifically in latent fingerprinting within biometric analysis. All of these open a new frontier in falsificates, financial and generally economic crime scene areas.

One Review on Solid Oxide Fuel Cell Applications

Shabana P. S. Shaikh¹, K.P.Adhi¹, Vojislav V. Mitic^{2,3}

¹ *Department of Physics, Savitribai Phule Pune University, Pune, India-411007*

² *University of Nis, Faculty of Electronic Engineering, Nis, Serbia*

³ *Institute of Technical Sciences of SASA, Belgrade, Serbia*

The fuel cell is a highly efficient electrochemical clean energy conversion device that converts chemical energy into electrical energy by reacting gaseous fuel (H⁺) with oxidizing gas (O₂⁻) through a solid ion conducting electrolyte with reduced greenhouse gas emission and reduced oil consumption. FC generates high alteration efficiencies as compared to the other available conventional combustion engine mechanical approaches. The working principle of batteries and fuel cell are analogues to each other for the production of electricity. Oxygen pass through the cathode and hydrogen or hydrocarbon fuels supply through the anode, and then the electrochemical reaction takes place at the electrode/electrolyte interface due to the active charge carrier passing
